SUMMARY

Senior backend engineer with 7 years of experience building payment systems at scale, including a zero-downtime multi-processor migration handling \$40M/year in volume. Strong in Go, Python, PostgreSQL, and Kafka, with a track record of leading cross-team technical projects and mentoring engineers.

EXPERIENCE

Senior Software Engineer — Meridian Health

Jun 2021 – Present

- Led 14-month migration from a legacy single-processor integration to a multi-processor platform (Stripe + Adyen), moving ~\$40M/year in payment volume with zero downtime via shadow double-writes and per-merchant cutover flags.
- Reduced declined-payment rate by 1.8 points by designing intelligent routing between payment processors in Go.
- Built a payment retry and dunning system (Python/Celery) that recovered \$2.1M in its first year.
- Cut mean incident resolution time from ~90 to ~35 minutes by overhauling Datadog alerting and authoring team runbooks; run the payments on-call rotation.
- Authored RFCs and drove architecture review for cross-team payment initiatives as de facto tech lead of a 5-engineer team; mentored 4 junior engineers, 2 promoted.

Software Engineer — Brightloop (acquired 2021)

Jul 2019 – May 2021

- Built and rebuilt on Kafka a data ingestion pipeline processing ~2M orders/day from Shopify and Amazon APIs into PostgreSQL across ~180 customer accounts.
- Migrated infrastructure from Heroku to AWS ECS with Terraform and GitHub Actions CI, cutting hosting costs ~45%.
- Shipped the cohort-analysis feature (React + Django REST) credited with closing the company's two largest deals of the year.

EDUCATION

University of Texas at Austin — B.S. Computer Science, Minor in Statistics (2019)

SKILLS

Languages: Go, Python, TypeScript, SQL

Backend: PostgreSQL, Kafka, Redis, Django, FastAPI, gRPC

Infrastructure: AWS (ECS, RDS, S3, Lambda), Terraform, Docker, GitHub Actions, Datadog

Certifications: AWS Solutions Architect Associate (2023)
